

## LABORATORY MEDICINE SERVICES

Head: Dr. Grignani Simona Francesca

### ARRIVE AT VIA PIOLTI DE' BIANCHI, 3

#### METHOD OF COLLECTING URINE SAMPLE TO SEARCH FOR HAEMATOBIMUM SCHISTOSOMA (BILHARZIA)

Obtain 3 sterile containers for the sampling.

Before urinating, the patient has to make 20 push-ups quickly or run up and down a flight of stairs several times.

The urine needs to be collected in succession, dividing them in the three different sterile containers.

The containers do not need to be filled completely but mark which is the container that was filled last.

*Please be advised that all Lab exams in Casa di Cura IGEA  
are executed Monday through Saturday and have to be booked in advance,  
either by phone nr. 02.70142555 or by email at [prenotazioni@casadicuraigea.it](mailto:prenotazioni@casadicuraigea.it)*

➔ Bring health card, social security number and identity card.
