

LABORATORY MEDICINE SERVICES

Head: Dr. Simona Francesca Grignani

ARRIVE AT VIA PIOLTI DE' BIANCHI, 3

METHOD OF COLLECTING URINE SAMPLE FOR UROCULTURE

- The collection of the urine has to be performed prior to or 7- 10 days after taking antibiotics or urinary disinfectants.
- Obtain a sterile container for the collection of urine at a pharmacy
- On the day of the collection as soon as you wake: wash your external genitals with water and soap or a disinfectant solution like Betadine (vaginal type is fine also for men).
Wash your hands thoroughly.
- Urinate, discarding the first spirt, which should be abundant.
- Open the sterile container at the last moment, collecting a small amount of urine and close the container immediately, without contaminating the interior part of the container with your hands.
- Deliver the sample to the clinic as soon as possible.
- It helps if the request for the exam is always made with the following wording: "Si richiede urinocoltura con eventuale carica batterica ed antibiogramma"

*At Casa di Cura Igea you can make Laboratory Exams
from 07.30 to 10.00, without an appointment.*

SATURDAY MORNING CULTURAL SAMPLES ARE NOT RETRIEVED

➔ Bring health card, social security number and identity card.
